C A U T I O N S

1. P.C. Board should not be exposed direct to the sun. Direct sunshine is very harmful to LSI(memory element).
2. P.C. Board to be stored or transported should be wrapped by a conductive pouch or alminum foil, because LSI and IC used in the machine are semiconductor integrated circuits of which basic element is MOS-FET.
3. When images on the Video Monitor screen are disturbed by powerful noise or other electrical causes, turn the main power off once and then on again.

2. INSTALLATION OF THE MACHINE

(1) Cautions on installation

- 1 The power cord of the machine should not be connected to a wall outlet together with large load unit(s) such as motor, cooler, etc.
- 2 Turn the power off before setting and removing the P.C. Board and connectors. Carefully handle them.
- 3 Do not touch IC, LSI and other electronic parts on P.C. Boards. Do not use a tester or the like on them. (They may be damaged by the inner voltage of the instruments.)
- 4 When exchanging a fuse, use a new one of the prescribed capacity.
- 5 The machine should be installed where it is not hot, keeping away from a heating appliance and direct sunshine.
- 6 The machine should be installed where it is not wet and dusty.
- 7 Do not touch the inside of the video monitor which has high tension units. Inform service station, if necessary.

(2) Adjustment of table height

(3) Earthing of machine

- 1 When the machine is installed in a wet place, it should be grounded to avoid accident by an electric shock.
 - a) Connect an earthing wire to the earthing terminal of the machine.
 - b) The opposite end of the earthing wire should be connected to an earthing bar which is firmly inserted into the ground.
- 2 Cautions
 - a) Do not connect the earthing wire to a water pipe, because polyvinyl-chloride pipes are sometimes used in the water lines and, if so, the electronic continuity is cut at the points.
 - b) Do not connect the earthing wire to the gas pipe absolutely. That is very dangerous.
